TRAVIC-EBICS-Mobile

Stay on top of your accounts and payment orders at any time and anywhere in the world

Manage your corporate finances on the fly

TRAVIC-EBICS-Mobile is the mobile control centre for corporate customers using the corporate customer portal TRAVIC-Port. On a smartphone or smartwatch, transactions on authorised accounts can be monitored and released on the fly in accordance with current EBICS security standards. TRAVIC-EBICS-Mobile also supports the distributed signatures supported by EBICS. In addition, the multi-bank capable app lists all booked and interim transactions and thus provides decision makers with a comprehensive overview of the company's finances.

Maximum security through two-factor authentication

TRAVIC-EBICS-Mobile offers the possibility to sign and cancel orders electronically even with the basic functionality scope. As of version 2.5, the app supports device-independent registrations with a second factor (2FA) at the corporate portal TRAVIC-Port. The PPI solution thus meets the strict requirements of the second payment services directive PSD2. For electronic signatures within the framework of the EBICS security procedures, PPI also relies on the particularly robust A006 key (RSA key) to securely view account information and to encrypt data exchange.

Stay up to date via push messages

TRAVIC-EBICS-Mobile is the ideal technical equipment for financial institutions that want to keep their corporate customers up to date in a mobile way. The app can be supplemented by PPI's push service to send targeted messages to smartphones or smartwatches and, for example, to draw attention to new account activity or transactions that need to be released. In combination with the EBICS bank server TRAVIC-Corporate, PPI enables financial institutions to actively communicate with corporate customers as soon as something important happens.

Individual look & feel for white labelling

PPI provides TRAVIC-EBICS-Mobile as a flexible solution for corporate customers, which can be adapted to the corporate design of a financial institution and can even be tailored to the processes of corporate customers in terms of its range of functions.

Communicate across borders

TRAVIC-EBICS-Mobile has no limits – at least not linguistic ones. The app is multilingual and currently supports German, English, French, Spanish and Italian.

Independent of the operating system

TRAVIC-EBICS-Mobile runs on smartphones with Apple's operating system iOS and Google's Android as well as various smartwatches. The app requires a TRAVIC-Port corporate portal from PPI.

Supported systems

- iOS 13.x and above
- Android 10.x and above
